OneAccess Networks and SYNNEX Corporation Enter Into Distribution Agreement

SYNNEX Reseller Partners Now Have a Preferred Choice for High-Performance Multi-Service Routers

Herndon, VA October 2, 2014 – OneAccess Networks, a global manufacturer of multi-service routers that enable cloud application delivery to SMB and enterprise end users, today announced that they have entered into a distribution agreement with SYNNEX Corporation, a leading distributor of IT products and services. Under the terms of the agreement, OneAccess Networks' One Series will be available to SYNNEX resellers, providing access to a range of multi-service router platforms optimized for the delivery of voice, data and cloud applications.

SYNNEX Corporation brings relevant technology solutions to the IT market, helping SMBs and enterprises enhance growth and be more effective with their go-to-market strategies. Through its CONVERGESolv Secure Networking group, SYNNEX allows resellers to build their customers' networks, add applications to each network and secure each network seamlessly.

"OneAccess Networks continues to bring to market the capabilities end users require in order to evolve their cloud-based business operations," said Dennis R. Gatens, senior vice president and general manager of OneAccess Networks, North America. "The One Series portfolio enables high performance and availability, while reducing CAPEX and OPEX to leverage business-critical cloud based applications."

The One Series brings high bandwidth services to SMBs and enterprises with a range of platforms that are optimized for the delivery of managed services. With performance scaling from 10 Mbps to 700 Mbps, Value Added Resellers (VARs) and Systems Integrators (SIs) can select the optimal platform for their managed services while taking advantage of a range of software features including eSBC, application visibility, control and acceleration. With the highest level of feature integration, end users realize a significant Total Cost of Ownership reduction through both CAPEX and OPEX savings, while VARs and SIs achieve customer retention with a set of application performance management software features for cloud service delivery.

"OneAccess is excited to collaborate with SYNNEX Corporation," said Bertrand Meis, CEO of OneAccess Networks. "As two recognized global leaders in technology solutions, our combined expertise and capabilities offer SYNNEX resellers a clear competitive edge for their end-user solution requirements."

A recent addition to the One Series portfolio is an integrated 4G/LTE WAN interface available on the One1540. For SMBs who are aggressively adopting cloud application delivery, business continuity becomes a critical need for their operations. With business-critical applications in the cloud, SMB and enterprise customers can now avoid disruption with the One1540's ability to automatically failover from its primary broadband to an integrated 4G/LTE wireless connection. Once restored, the One1540 will automatically revert to the broadband connection. In addition to managed services for the SMB, the One1540-4G addresses the requirements of key vertical segments including hospitality and education where both high performance and business continuity are required.

With the OnePlus portfolio of application performance management features, VARs and SIs can offer the SMB and enterprise a superior Quality of Experience for their business-critical cloud-based applications. OnePlus software features, NetAPM and NetControl, offer end point visibility and control of the performance of cloud applications from the SMB's perspective, which is critical for reliable cloud application delivery.
