

Munich, November 15, 2019

ERS electronic, the industry leader in the market of thermal management solutions for semiconductor manufacturing, is pleased to announce Microworld as their new distributor for France, Switzerland and North Africa. As of October, Microworld has been selling and servicing ERS' cutting-edge Thermal Chucks to their clients, from their headquarters in Grenoble. With more than 28 years of experience, Microworld has become known as a reliable supplier of high-quality equipment solutions that offers valuable technical expertise and additional personalized services for the semiconductor industry.

“Much like how we aim to offer only the very best solutions to our clients, Microworld promises only the very best production and laboratory solutions to theirs. We share the same desire for excellence in quality, service and tailored solutions”, says ERS Electronic CEO Laurent Gaii-Miniet. “We know that Microworld always puts the customer at the centre, and they continue to demonstrate substantial knowhow in probing characterization and parametric test. Many of their clients include research facilities and laboratories, which our specialty chucks are ideal for. This presents a great opportunity for us, and will help further the growth of both companies.

“We are very excited about the chance to represent ERS electronic in the selected regions, and to add their renowned Thermal Chucks to our product portfolio.” says Marie-Laure Tresca, the Executive Director of Microworld. “We pride ourselves on being able to offer our customers the best possible solutions, and ERS has continuously proved that they share this ambition, which is why I’m convinced that this will be a very successful partnership.”
