Lotus 1, Microcontroller (MCU) for home appliances designed by Cortus is available

Feb 27, 2023

Cortus Lotus 1, the MCU for home appliances

- Cortus Lotus 1 is a 32-bit general purpose microcontroller for consumer market and particularly designed for home appliances.
- Based on the RISC-V core with an impressive balance of processing power, ultra low power consumption and peripheral set, Cortus provides a complete tool chain (SDK) from the MCU chip to software libraries and development board; creating a robust RISC-V development ecosystem to accelerate and simplify integration into the final product development stage.

Engineering samples available
